Brookfield Renewable Power Brazil Operations

Focusing on growth

As the largest and growing independent power producer in the small hydroelectric segment in Brazil, Brookfield Renewable Power is a recognized preferred local operating partner and has been a significant investor in the country for 110 years. The company owns and operates 35 hydropower facilities and continues to acquire and develop renewable energy projects in Brazil. Brookfield Renewable Power is one of the most cost-effective producers of electricity in Brazil, Canada and the United States. Our Brazil operations are an important part of the company's overall 4,300-megawatt, \$16 billion portfolio of primarily hydropower and wind projects.

In Brazil, Brookfield Renewable Power operates under the name Brookfield Energia Renovável.

BRAZIL

Asset portfolio

35 hydropower facilities

Generating Units

79 units

Total installed capacity

626 megawatts (MW)

Geographic diversification

23 river systems

Ownership

Wholly-owned subsidiary of Brookfield Asset Management (TSX/NYSE: BAM.A and BAM Euronext Amsterdam: BAMA)

Salto Natal Generating Station, South Region

Itiquira Generating Station, Midwest Region

Carbon Credits

Small hydro projects in Brazil qualify under the Kyoto Protocol to receive carbon credits that may be used for compliance with GHG emission regulations in industrialized countries that have implemented the treaty. Brookfield Renewable Power was the first energy company to sell its carbon credits from qualified small hydro facilities in Brazil, generating \$12 million in incremental revenues for the period from 2008 to 2012.

Brazil Growth

Actively targeting small hydro opportunities in Brazil

Brookfield Renewable Power has built a very strong organization and track record in Brazil to acquire and develop hydro power plants, with the ability to manage and undertake construction of six to eight new hydro power generating stations per year. Brookfield Renewable Power's current pipeline of projects totals exceeds 800 MW. Currently, we have 250 MW of hydropower projects in the late stages of development and two projects have been commissioned within the last year.

Brazil Hydropower Assets

Region	Generating Stations	Installed Capacity (MW)	Annual Generation (GWh)
South Region	7	150	804
Southeast Region	20	200	959
Midwest Region	8	276	1,758
Total	35	626	3,521
